Domain Constraint

```
Create DOMAIN Range as Integer Not Null  
CHECK (value >=10000 AND value <=100000);
```

```
Create table staff (  
S_id char(9) PRIMARY KEY,  
S_Name varchar(30),  
S_Salary Range  
);
```

```
Create DOMAIN ID as VARCHAR PRIMARYKEY  
CHECK (SELECT FORMAT(##k-####));
```

The SELECT-FROM-WHERE Structure of Basic SQL Queries

SELECT <attribute list>
FROM <table list>
WHERE <condition>;

where

- <attribute list> is a list of attribute names whose values are to be retrieved by the query.
- <table list> is a list of the relation names required to process the query.
- <condition> is a conditional (Boolean) expression that identifies the tuples to be retrieved by the query.

Query 01

Retrieve the birth date and address of the employee(s) whose name is 'John B. Smith'.

Query 02

Retrieve the name and address of all employees who work for the 'Research' department.

Query 03

For every project located in 'Stafford', list the project number, the controlling department number, and the department manager's last name, address, and birth date.

Query 04

Select all EMPLOYEE Ssns (QA)

and all combinations of EMPLOYEE Ssn and DEPARTMENT Dname (QB) in the database.

Query 05

Retrieve the salary of every employee (QA)
and all distinct salary values (QB)

Query 06

Make a list of all project numbers for projects that involve an employee whose last name is 'Smith', either as a worker or as a manager of the department that controls the project.

Query 07

Retrieve all employees whose address is in Houston, Texas.

Query 08

Show the resulting salaries if every employee working on the 'ProductX' project is given a 10% raise.

Query 09

Retrieve all employees in department 5 whose salary is between \$30,000 and \$40,000.

Query 10

Retrieve a list of employees and the projects they are working on, ordered by department and, within each department, ordered alphabetically by last name, then first name.
