SUBJECT:	Progress Report for Writing Developer so far in Semester's Research Paper

Introduction

This report is meant to cover the progress of the continuation of the writing efforts that have so far encompassed the assigned project in SS 153, "Technical Business Writing", at National University of Computing and Emerging Sciences, Karachi. Recent developments have led to immediate attention to further research into the 'Discussion' and 'Findings' sections. Time slots allocated previously over the week have been utilized into better the understanding, and to the process of discovering newer resources. These decisions have been influenced by the previous suggested activity of developing the 'Questionnaire' and the 'Findings' section. Time was affected to some degrees due to the data collection duration, with Eid being celebrated in the last week, and the spread of course work in the current semester as well. Factors such as these have brough the current research paper to a slow level of progression, but great headway can be expected soon.

Work Completed

expected soon. Since the mid evaluation, that is, Mid 2, a considerable amount of work has been put into pipeline, such as,

1. A completed title written with a proper research paper title, the names of the authors, along with the emails, and the Department of Computer Science
2. A newly written abstract which talks about the problem, proposed solutions, the substantiated approach, the concerned variables, and the impact that the research material may have, along with potentially useful keywords to better index the research paper upon prospective publication opportunities
3. A completed introduction, with a proper literature review keeping in mind the research question, and focusing on the major aspects to make the ideas relate to the research question at hand
4. A complete methodological section which has subsections for 'Participants', 'System', and 'Problems', which of which talks about a certain aspect of the Methods to gather data, the demographics involved, the methodology of collection, and the obstacles noticed when in the process of doing so.
5. The 'Findings' section, with 70% of the work done. This includes a short introduction about the findings themselves with a reminder into what the data collected is, followed by the 'Demographics', 'Technology', 'Social', 'Persistence', then the 'Psychology' section. The 2nd and the 5th sections are the only ones remaining to have proper content, for now, they are decorated with the right template for writing the results
6. The 'Discussion' section, written 40% so far which includes the beginning introduction paragraph and a section over the 'Explanation of Results'
7. Questionnaire completed, shared, which successfully collected 122 submissions throughout the University. This is attached along with the paper
8. More references for data and citation purposes for the purposes of citing in the 'Discussion' section are taken in to fulfill the 'completeness' aspect of the 'Discussion'

All of this as updated till 19th May, 2021.

Work Remaining

All of this as updated till 19th May, 2021. As stated before, the sections yet remaining to be completely finished are 'Findings', 'Discussion', and the 'Conclusion', where the subsections such as 'Psychology' and 'Technology' are to be wrapped up in 'Findings', along with three of the subsections in the

'Discussion' aspect as well, and the 'Conclusion' section, with its 'Recommendations' subsection as well.

Adjustments

Some unavoidable adjustments have been made over the last progress report. Not enough time was planned to learn Structural Equation Modelling (SEM) software to provide better regressive analysis over the data, rather, a descriptive view of the data has been provided to replace that. The main culprit that caused this factor is time for now.

Conclusion

The current work is progressing as expected. The results have sadly currently fallen back a 4-day span, as it should have been completed until now. The final view of the determined project will focus on catering best to the missing requirements and updating them as soon as possible. Last changes are hopefully till 20th May.
